

NAME

akfnetzpass – generate obfuscated credentials for akfwebserver

SYNOPSIS

akfnetzpass [*file*]

DESCRIPTION

With the program **akfnetzpass** you can generate obfuscated credentials for **akfwebserver**(1).

The credentials are requested interactively. **Attention:** The Password is shown while typing.

If a *file* is given, the credentials will be appended at the end of the file. It should be a configuration file for **akfwebserver**(1). If the file doesn't exist, it is created.

If no *file* is given, it is shown on the standard output. That can be redirected. (The prompt is shown on standard error.)

Important: This is no encryption! It can easily be converted back to clear text. The data still must be hidden from the eyes of unauthorized persons. The obfuscation is just there, so you don't see the password each time you edit the configuration file.
