1 Introduction

This manual is a collection of the Tix manual pages. It describes in detail all the widgets and procedures in version 4.0 of the Tix library.

2 Note to Alpha Testers

This is only an "alpha version" of the reference manual. Some of the manual pages are not up-to-date. If you see a "Tix 3.6" heading in a manula page, it is very likely this manual page is already outdated. The pages with a "Tix 4.0" should be fairly up-to-date. If a feature is mentioned in these newer manual pages but not present in the alpha version of Tix you currently, it is probably because these features have not be implemented.
