

Use these icons to keep track of the robots locations as you move them through the Underground Complex

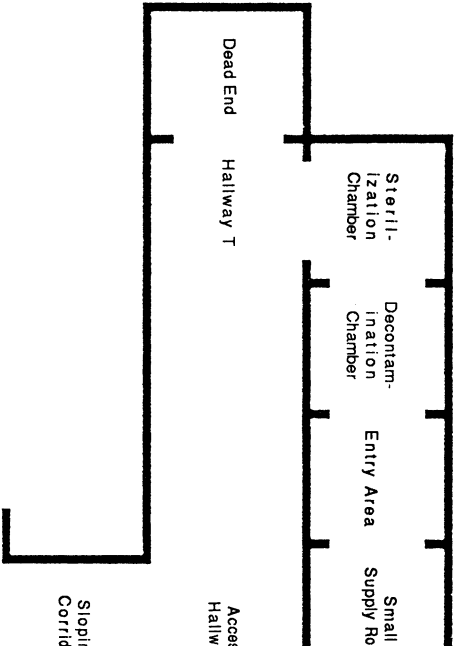

Cut on line.....Cut on line.....Cut on line.....Cut on line.....Cut on line.....Cut on line.....

This schematic represents your new environment. Study it carefully. Should you be awakened, your survival and that of Contra will depend on how successfully you manipulate your robots through this complex.

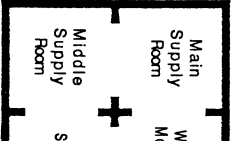

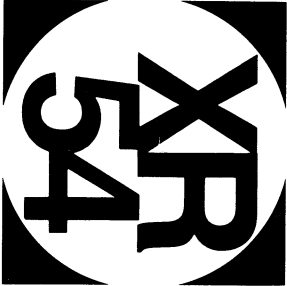

The consequences of disorganization during a crisis were spelled out to your in graphic detail during your briefing. Let this reminder suffice: you must remain continually aware of your robots' precise locations. Cycles spent determining a robot's whereabouts will only increase the number of surface-side casualties.

For this reason, you are strongly advised to utilize this schematic and the discs (Symbolized below) to track your robots' movements.

Pleasant dreams.
